

VULCANISED JOINED RINGS

Exterior lighting; security equipment; control boxes and filtration equipment need to stand up to many tough challenges. Cold weather, blistering heat, ultra violet rays, rain, ozone and worst of all your competitors! As a manufacturer, your reputation and ultimately your bottom line is dependent upon the integrity of seals and gaskets in your products. Poor sealing elements can shorten product life and sabotage otherwise solid designs.

If you are looking for a solution to your sealing needs, then J-Flex can provide the answer. Whether its simple cord rings – or custom made profile seals – we can offer a choice of hot vulcanised joints; completely moulded seals and even adhesive bonded rings. Cut gaskets, washers + fabricated corner joints are also part of our fabrication offering.

Supplying only premium grade elastomers, J-Flex make parts from Silicone, EPDM, Viton®, Neoprene – dependent upon the application and budget. In addition we offer sponge materials and being soft they take up uneven gaps or misalignment, that solid materials cannot do, whilst maintaining a perfect seal.

Joined rings have no upper limit on inside diameter.

Not only does J-Flex offer a wide material / product range, we also present a range of options in which to deliver your products. J.I.T. and same-day despatch are just some of the ways we help customer sensitive inventory plans. Our high performance rubber seals will improve your business and keep your products working the way you and your customers expect.

Contact us today and let us know how our high performance products will improve your business.
